

TRUESTREAM™

HARMAN

HARMAN TrueStream™ connectivity was created to deliver the best audio performance and to enhance the overall listening experience of wireless audio devices. HARMAN TrueStream connectivity optimises for *Bluetooth*® bandwidth, simplifies device setup and enhances audio-signal processing to address the loss of audio quality from the compression of audio files.

So, what *is* HARMAN TrueStream connectivity? It's a way of implanting *Bluetooth* technology so that it delivers the best wireless audio to your device. Think of it as *Bluetooth* hi-fi.

What problem is TrueStream connectivity solving? *Bluetooth* technology is streaming audio that compresses the source audio, which causes performance degradation. In addition, not all *Bluetooth*-enabled devices are created equal since the technology has many optional features that may not be present in your device. TrueStream connectivity includes features that are designed to enhance the overall listening experience of wireless audio, including optimal audio codec selection based on available bandwidth, connection setup and switching, as well as audio-signal processing that addresses the loss of audio quality from compression.

What you get with the TrueStream name is the confidence that your device will deliver the best audio regardless of its wireless technology. TrueStream connectivity represents an investment into audio-signal processing and acoustic technologies so that you can have a high-quality experience. With TrueStream connectivity, you can enjoy the highest quality audio without the wires.

HARMAN TrueStream connectivity also offers:

Multi-Device Memory

An eight-device memory allows you to store more streaming devices than you can with ordinary *Bluetooth* technology. This means you have to pair your device only once.

Bluetooth Wake-Up

With HARMAN TrueStream connectivity, you get automatic on-and-off for any HARMAN *Bluetooth*-enabled device that goes into standby. There's no need to hit the power button, the wireless signal does it for you.

Voice Feedback

HARMAN TrueStream voice prompt delivers a clear, human-voice interface that helps you set up and interact with your *Bluetooth*-enabled HARMAN speaker.

TRUESTREAM™
HARMAN

Soon, HARMAN TrueStream technology will let you use multiple devices and eventually multiple speakers for your home entertainment. As HARMAN continues to develop TrueStream technology, each device that has it will be updated as necessary, making each user experience the best in class for HARMAN wireless devices.
